Founded in Taiwan in 1984.

A global manufacturer specializing in automation technology and equipment

Committed to bringing people a happy and beautiful life with unimaginable automation technology and equipment with new experience

Geographical
Operation Coverage,

20

It covers over **30 industries**, including lithium battery, automotive, tire, pharmaceutical, home appliance, e-commerce, high-tech agriculture, express delivery, and fresh supermarket sectors, with a track record of over **8,000** completed projects.

Global Corporate
Locations

8

Houng Fuh's headquarters are located in Chuzhou, Anhui Province, with **8** major corporate locations around the world. It has strategic partners in France, Switzerland, the Netherlands, Spain, Japan, South Korea, Thailand, South Africa and other countries/regions. As a global enterprise, its customers and operations span the Americas, Europe, Asia, Oceania and Africa.

Sorting System

Houng Fuh's self-developed high speed shoe sorting system.

Developed and showcased in Taiwan in 1991, it has over 30 years of application experience and is widely used in e-commerce, express delivery, apparel, supermarkets, pharmaceuticals, tires and other industries.

A 3D perspective rendering of a high-speed shoe sorting system. The system consists of a long, green, modular conveyor belt structure supported by metal legs. The conveyor belt is divided into multiple lanes by vertical dividers. At the end of the system, there are several green robotic arms or actuators. The background is a dark blue gradient with a bright green light streak running along the bottom. Large green arrows on the left and right sides of the system indicate the direction of flow.

High Speed Shoe
Sorting System

Sorting System

Cross-belt sorting system is a system equipment integrating mechanics, electronics, optics, and information.

Meets the production and operation process requirements of various logistics companies, standardizes cargo handling procedures, and accelerates cargo handling efficiency.

T/GJSH000003—2020

Developer of group standards on the inspection and acceptance of cross-belt sorters

T/GJSH 000006—2025

Developer of group standards on the inspection and acceptance of cross-belt sorters

**Cross Belt
Sorting System**

Sorting System

The Houg Fuh's linear narrowbelt sorting system is a high-efficient, cost-effective, and multi-functional sorting device.

It is suitable for sorting scenarios where the goods are large and the requirements for automated sorting capacity, applicability and sorting ability are high.

Linear Narrowbelt
Sorting System

Spiral chute is used for vertical non-power conveying equipment

It has the characteristics of standardization, modularization and mold development.

Spiral Chute

Sorting System

The swivel sorter system is a high-efficient and high-precision sorting solution with an extremely low failure rate.

It is widely used in various logistics and distribution centers for sorting boxes, pallets, parcels, books, fragile items, etc.

A 3D perspective rendering of a swivel wheel sorting system. The system features a central hub with multiple swivel wheels that rotate to direct items into different output lanes. The lanes are formed by green and blue rollers. Green arrows indicate the flow of items from the input on the left into the central hub and then into the various output lanes on the right. The entire system is supported by a metal frame.

Warehousing And Logistics Products

Intelligent Warehousing System

Intelligent warehousing systems can be applied to the storage and distribution of materials and goods, improving storage efficiency, reducing costs, enhancing security and management efficiency. They are a type of warehousing system with a wide range of applications.

Automated
Warehouse Rackings

AGV、RGV

Packaging And
Palletizing Systems

Stacker Cranes

Conveyor
Equipment

WMS (Warehouse
Management System)

Goods To Person Picking System

The "goods-to-person" picking system enables automatic picking of B and C product retail goods upon delivery to the customer.

The "goods-to-person" picking system at the picking workstation, combined with multi-level shuttle car three-dimensional storage and box conveyor line handling, and the switchable inventory mode and box consolidation mode, solves the problem of labor-intensive single-item operations.

RGV is widely used in automatic logistics system

It can perform tasks such as picking up, transporting, and placing goods, and can communicate with a host computer or WMS system. Combined with identification technologies such as RFID and barcode, it can realize automated identification and storage functions.

Four-Way Shuttle System

The four-way shuttle system can be combined with automated racking, elevators, and intelligent scheduling systems to enable flexible storage and retrieval of goods in three-dimensional space. Space utilization is increased by 30%-50% compared to traditional warehousing, supporting multi-vehicle collaboration and cross-level operations, doubling inbound and outbound efficiency.

AGV can accurately follow a prescribed path, reach the designated location, and complete a series of tasks. They are widely used in warehousing, manufacturing, logistics, and other fields.

By collaborating with partners and combining AGV/AMR technologies, Houngh Fuh is able to provide a variety of customized solutions.

Intelligent Packaging Sorting And Palletizing System

Intelligent Packaging Sorting and Palletizing System

This system can automatically package barrelled materials (such as cartons, cardboard drums, iron drums, etc.), realizing functions such as automatic identification, weighing, unpacking, packing, re-inspection, sealing, conveying, palletizing, and warehousing of goods.

(In addition to partner scenarios, we can also provide selection and procurement services for well-known brands like FUJI-ACE, ABB, KUKA & etc, tailored to meet our clients' specific needs.)

Roller Conveyor

Automated conveyor systems mainly include roller conveyors, belt conveyors, and pallet conveyors, used for transporting tow boxes and cartons. Roller conveyors can be combined with other equipment to form complex logistics conveying systems, with applications spanning various industries.

Belt Conveyor

Belt conveyors, as an important material conveying equipment, are widely used in various industries.

Conveying various bulk materials, cartons, and packaging bags, as well as single-piece goods with relatively light weight, enabling modernization and automation of production.

T/GJSH+000037—2025

Developer of group inspection and acceptance standards for curved conveyors

Chain Conveyor

Chain conveyor lines can be classified into chain type, chain plate type, double speed chain, mesh belt type, etc.

Chain conveyor lines are mainly used in the inbound, assembly and packaging, online picking, and outbound areas of automated warehouses.

Core Intelligent
Technologies, Multi-
System Integration And
Empowerment

Self-Developed Comprehensive Intelligent Warehousing System.

Core Positioning And Strengths

Dual-Core Strategy And Control:

WMS manages strategies, WCS controls devices, creating a closed-loop intelligent logistics hub.

End-To-End Digital Visualization:

Real-time monitoring via digital dashboards provides a clear overview of inventory and operational status.

Advanced Technology Architecture

Modular design with separation of front-end and back-end, allowing for flexible system expansion and easy maintenance.

Proven Stable And Reliable For In-House Use

After long-term in-house verification, it can be quickly replicated to customer projects.

SCADA System

SCADA

Data Acquisition And Monitoring Control System

It can monitor and control on-site operating equipment, realize data alarm, hierarchical access management, support multiple access methods such as C/S and B/S, and has functions such as data acquisition, equipment control, measurement, parameter adjustment and various signal alarms.

Houng Fuh is focusing its efforts on developing a digital twin system, fully launching a new phase of transformation from SCADA operation and maintenance management to full-scenario digital twin empowerment.

Multi-Industry

SOLUTIONS

Multi-industry Solutions

The company is dedicated to global factory and logistics automation, providing high-quality automation technology equipment and services to make logistics automation more human-centered and intelligent.

Multi-Industry Solutions

Automotive/Tire Industry Application

Houng Fuh provides solutions for global automotive industry customers such as PROTON and PACCAR Group in various fields including motor vehicle and parts assembly, painting equipment, and automated conveying.

Multi-Industry Solutions

Daily Chemical Industry Solution

The demand for automated production in the cosmetics and personal care products industry is also gradually increasing. Houg Fuh automates the entire process from production to transportation for its clients in the daily chemical industry, and has accumulated rich practical experience from serving past clients.

Smart Agriculture Digitalized Production

Digitalized agricultural production refers to the use of automated technologies and equipment in agricultural planting, fruit sorting, and scientific breeding to achieve large-scale automated production. This effectively promotes the industrialization of agricultural development, improves agricultural production efficiency and economic benefits, and facilitates the transformation of agriculture towards automation.

Multi-Industry Solutions

Food And Beverage Production Line

In the areas of automated production, including food conveying, processing, sorting, packaging, and storage, we provide standardized, refined, and customized automated equipment services to meet the logistics needs of food and beverage companies. We have served globally renowned brands such as F&N, SONOCO, Coca-Cola, and Kellogg's, enhancing Houg Fuh's reputation in the food and beverage industry.

Multi-Industry Solutions

E-commerce Sorting And Distribution Center

In e-commerce logistics, rapid parcel sorting and accurate delivery within a shorter timeframe have become key competitive advantages for e-commerce companies. Houg Fuh has provided services to major domestic e-commerce companies such as JD.com, Tmall, Dangdang, and Vipshop.

Express Sorting And Distribution Center

Sorting speed is crucial for on-time delivery of express packages. Houg Fuh's sorting systems significantly improve sorting efficiency, facilitating large-scale operations in the logistics sector, and are becoming widely adopted sorting equipment in express delivery and distribution centers. Current clients include China Post, SF Express, Cainiao, Yunda Express, and Xiangyi Freight.

Multi-Industry Solutions

Pharmaceutical Industry Logistics Center

We provide warehousing and logistics distribution management solutions for the pharmaceutical industry, including barcode identification systems, inbound and outbound conveying and sorting systems, conveying and storage systems, and goods-to-person picking systems.

We serve clients in the pharmaceutical industry such as Jointown Pharmaceutical Group, Dashenlin Pharmaceutical Group, and Jiasitang Pharmaceutical Group.

Multi-Industry Solutions

Home Appliance Production Line

For customers in the home appliance industry, we automate the entire production process from raw materials to each stage of the production system, all the way to packaging and shipping. Our clients include home appliance brands such as Panasonic, Gree, Midea, and Daikin.

Multi-Industry Solutions

Supermarket And Home Furnishing Store Sorting Centers

Supermarkets and retail stores offer a wide variety of goods in large quantities, requiring high accuracy and sorting efficiency. Our automated sorting solution can improve efficiency by 40%.

Digital, Maternal & Infant Products, And Other Industries.

Houng Fuh provides complete plant automation solutions for various industries such as digital products and maternal and infant products, effectively solving the pain points of low efficiency and high cost of manual handling of raw materials, semi-finished products and finished products in various industries. In response to the complex warehouse management needs brought about by the omni-channel operation models of different industries, it strengthens the enterprise supply chain system by building an efficient warehousing and logistics system, and adapts to the diversified business development of various fields.

Pharmaceutical Industry Case Study:

DASHENLIN PHARMACEUTICALS.

Da Shenlin Pharmaceutical Group Co., Ltd. is one of the most influential pharmaceutical retail chain groups in China and the largest chain pharmacy enterprise in southern China, **currently 9,578** operational stores. Houg Fuh has been serving Danlin Pharmacy since 2015, helping Danlin build dozens of pharmaceutical logistics centers, including warehouses in Nanning, Luohe, Guangzhou, Hailong, and Shantou.

New Model For Dashenlin Intelligent Logistics Center Project

01

Innovative Application Of This Project

Visual Verification System + Cross-Belt Sorting System + Consolidation Mode.

To simplify operational logic processing, a visual verification system based on deep learning algorithms can accurately identify and count large quantities and categories of medicines in batches.

Innovative Application Of The Cross-belt Seeding System.

The sorting efficiency can reach **600** rows/hour, which is **2.5** times higher than the picking efficiency.

Deconstruction And Selection + Automated Warehouse Consolidation.

The Dashenlin project adopted an intelligent piece picking method: the WMS system issues batches to the equipment, pushes orders after inventory allocation, pickers request picking tasks, and after confirming the picking, place the goods on the temporary storage line. For consolidation, a "lift + shuttle + flow rack" model is used to automate outbound consolidation in the logistics center.

Sorting
Efficiency

6K-20K Rows/Hour

Picking Efficiency
Increased By

2.5 Times

Daily Outbound
Volume

30000 Items

Reduction In
Picking Personnel

50%

This project represents the first attempt at using a cross-belt sorting system in the warehousing operations of chain pharmacies. After the goods arrive at the warehouse and are sorted by the staff, packages are supplied according to the aggregated needs of the stores. A total of 16 temporary storage lines for package supply are set up, with nearly 100 cross-belt slots. After the project goes live, the average daily outbound volume can reach more than 30,000 items, and the personnel input in the operation process can be reduced by up to 50%.

Shaanxi Haichuan Pharmaceutical Project

Project Background:

The total investment amounts to

10.5

With a total construction area of approximately

176,300

Sq. M

Shaanxi Haichuan Pharmaceutical Logistics Co., Ltd. is the largest third-party pharmaceutical logistics company in Northwest China.

Currently, the warehouse conveyor and sorting system equipment in the new park – Shaanxi Digital Pharmaceutical Industrial Park – is already in operation.

The Shaanxi Digital Pharmaceutical Industrial Park project is a key medical industry project in Shaanxi Province in 2022, with a total investment of 1.05 billion yuan and a total construction area of approximately 176,300 square meters. It includes main buildings such as a logistics center, a digital center, and a support center, and is a high-standard industrial park for a modern, professional, and digital pharmaceutical supply chain, a key focus of Shaanxi Province's pharmaceutical distribution industry development.

Jointown Pharmaceutical's “Shenzhou No. 1” Intelligent Logistics Center Project

Shenzhou No. 1

It boasts the most product specifications (30,000 specifications), the highest daily outbound orders (10,000 orders), the highest daily outbound items (100,000 items), and the highest daily outbound volume (50,000 pieces) in China's pharmaceutical industry, with annual sales reaching **20 billion yuan**.

The project site is mainly divided into seven areas: full-case outbound area, full-case replenishment area, verification and sorting area, empty box return area, split-case outbound area, split-case replenishment area, and outbound sorting area. The split-case area adopts an automated warehouse, multi-level shuttle, and goods-to-person system, with a single-hour throughput of **2400** boxes and **1000** picking items per hour. The picking accuracy reaches **99.9%**, and the project's outbound efficiency is **8000-10000** pieces per hour.

THANK YOU
